when the previous one fails. Some question from customer having problem and they want to know if we can add 2 to the device in their port. In my office we have a port of 100Mb and we are going to add another 100Mb port to the existing one. Is that possible? A: The answer is yes, you can have two "downstream" modules. If your old ones are in the CISCO box, then you can connect them in parallel, assuming that they are the same model (SSC-E) and you give them a common IP address (the same method as if you were to add a new port in a current SSC-E). If they are "downstream" from the access layer (NAT/PAT), then the most common way to deal with that would be to make a "mirror" interface for your two new interfaces on the 10G SSC-E and connect that to the old ones. Otherwise, the simplest solution would be to purchase a new SSC-E. 8.27.2008 Today I present to you a new holiday in my book. It is not Easter, not Passover, not Memorial Day and not our Annual Fourth of July. Rather, it is a celebration of the winter solstice and the triumph of light over darkness. In celebration of this, I have posted a rainbow over my desktop. I'll be tweeting from the solstice this afternoon. Today I am going to talk to you about a place I have never been, a place that is so special to me, a place I can't even describe, but I can tell you where it is. I first discovered this place during my 3rd year of teaching middle school. It was while trying to figure out what to do when my seventh graders got to the "big kids" lockers. I saw a small blue cubby with a couple of books and my thought was, "Oh, well, that's okay." But before I could figure out why my thought was so much less than my desire, I opened the door and saw that it was actually a little office for my kids. There were small lockers, perfect for the projects they worked on and a few of the kids had a collection of the books they'd read that year. The boys' office was usually locked and the books were in a book box in the
